

# Asset Integrity - Norway

- Our scope for asset integrity covers: From well to onshore
  - Key issues: Safety critical equipment/systems, structures, wells
- Lifetime is established in the design phase
- However, prevailing conditions always cause reduction of lifetime - all assets are exposed to aging
- The challenge is to maintain original condition as long as possible
- In Norway, application for consent to extend lifetime must be sent 1 year before lifetime expires
- Since there are no proper standards for lifetime extension we have requested the OLF to develop such standards
